

A large Chinese company has the intention to get into the Europe's offshore platform decommission market. For these projects they are looking for experienced persons who can work for offshore platform decommission, this vacancy is for 2019 to 2020 at least and will confirm the contract each year.

Three kinds of experience persons are needed:

1. Person who is familiar with the underwater wellhead plugging, he/she should be capable to write the procedure for underwater wellhead plugging. It is preferred that he/she has some project experience of North Sea offshore platform decommission as the wellhead plugging designer or engineer.
2. Person who is very familiar with the jacket and topside decommission procedure, he/she should be capable to write the proposal and develop the decommission methodology. It is preferred that he/she has some project experience of North Sea offshore platform decommission projects as the project engineer or project manager.
3. Person who is very familiar with the QSHE planning for the offshore decommission projects, he/she should be capable to write the procedure for the planning of the quality, safety, health and environment (QHSE) etc. It is preferred that he/she has some project experience of North Sea offshore platform decommission projects as the QSHE manager.

When you are interested, please provide short resume and CV by email to public@tarka-systems.nl. Your info will be forwarded to China and when approved all following communication is done directly between Chinese company and candidate.
